

Vitapol feed test at farrowing

Kurucz Farm Ltd. august 2013.

Ebes, Hungary

Feeding protocol: from day 90 of gestation (the last third of gestation) 1% of VITAPOL pulvis into the feed of pregnant sows. On the day of farrowing pour 1 dl of Vitapol suspension on the feed of the sows. At farrowing until weaning of lactating sows mix 1% VITAPOL pulvis into the feed. If the sows get flushing feed after weaning it should also contain 1% VITAPOL pulvis, and as well for the first 30 days post-weaning feed of pregnant sows.

| | Controll | Vitapol |
|-----------------------------|----------|---------|
| Sows farrowed (peace) | 31 | 35 |
| Piglets born (peace) | 327 | 351 |
| Average litter size (peace) | 10,54 | 10,68 |
| MMA syndrome (%) | 10 | 0 |
| Piglets weaned (peace) | 9,29 | 9,51 |
| Weaning weight (kg/peace) | 7,15 | 7,90 |
| Mortality (%) | 12,00 | 11,00 |
| Age at weaning (days) | 28-32 | 26-32 |
